

WEARABLE MEDICATION VIAL HOLDER, AND VIAL FOR USE THEREWITH

ABSTRACT OF THE DISCLOSURE

5 A wearable vial holder for securing at least one vial of medication on the person
of a medical practitioner comprises a body-engaging member structured and arranged to
be secured to a part of the body of a medical practitioner, and a vial gripper affixed to the
body-engaging member for releasably grasping and holding at least one vial so that the
practitioner has access to the vial(s) for one-handed drawing of medication therefrom
using a syringe with a needle. The vial holder includes a needle-puncture-resistant shield
10 to protect the practitioner against accidental needle sticks.
